Problem Statement

Research and Development wants help to determine new product ideas and pricing using existing product line as a benchmark.

Solution Summary

We've identified several product gaps in the existing product line including:

1. Aluminum Over Mountain
2. Aluminum Triathalon

The Data Science Team has developed a pricing model that uses predictive analytics to estimate the price of the new bicycle models based on the existing fleet. This ensures that new models are priced comparatively to other similar bicycles.

New product prediction for 2 new models:

1. Trigger, Over Mountain with Aluminum Frame: \$2,985
2. Slice, Triathalon with Aluminum Frame: \$2,438

Next Steps: Integrate the model into a proof-of-concept web application that can be deployed to the R&D department.

Gaps

The visualization segments the full bicycle product line by category and frame material. This exposes two product gaps:

1. New **Aluminum** line of bikes in the **Over Mountain Category**
2. New **Aluminum** line of bikes in the **Triathlon**
